

# FOREST INVENTORY ANALYSIS

GEORGIA FORESTRY  
COMMISSION

**Note about county data consistency:** While state level data remains consistent and consistently accurate, county level data queries made prior to Feb. 2007 will vary from current year county level data queries of the same data. This is due to changes in the methods used by the U.S. Forest Service to compile the data to comply with national standards. Due to large plot expansion factors (1 plot for ~ 6000 acres) and the relatively small acreage of most counties, county level forest data has always had a high standard error (but is often used since it is the only data available). Ideally, a minimum of several counties should be used for data queries. However, individual county data can be used as long as the limitations of the data are realized.
